

# Are You Taking An Expensive Gamble With Your Company's Critical Data And Network Security!

## To Find Out, See If You Can Say “Yes” To These 5 Simple Questions

1. Are you absolutely certain that your data IS being backed up **DAILY** to a secure, remote location?
2. Does your IT person conduct a **TEST RESTORE** of your data at **LEAST** once a month – and then give you a report to validate all the data is there?
3. Do you know exactly how fast your network could be back up and running if your server broke down or a disaster happened?
4. If you had to access your data in an emergency, would you know how to even
5. if your IT guy wasn't around to help you?
6. Does your IT person give you a weekly report to verify your network is being monitored 24\7 - 365 for hackers, viruses, and even internal attacks?

Dear Fellow Business Owner,

If you are like most of the Executives I talk to, chances are you can't give a confident “Yes” to these simple questions about your company's back up and network security. Even though your IT systems and data are **critical** to every aspect of running your business and serving your customers, most owners will confess that they do not know all that much about this important area of their business and are purely **hoping** that their current IT person “has it handled.”

**That's why I've sent you a poker chip with this letter.** You could be taking a **BIG** gamble if you don't know the answers to these basic questions.

## Hope Is NOT A Good Strategy!

My name is Steve Santamouris VP of Business Development at Mazteck. We specialize in tailored IT services and solutions for small & medium businesses. And one area we help businesses save money is by preventing sudden “emergency” repair and restoration services due to an unexpected server crash, hacker attack or other data-erasing disaster. Just one of these incidents can cost you dearly in urgent restoration services, lost productivity and profits from missed sales or failure to deliver work products to clients. And in the litigious society we live in, you cannot take chances with data security and storage of your backups.

## Free IT Assessment Reveals The Truth

That’s why I’d like to offer you a **free**, no-obligation, no-sales pressure IT Assessment to conduct an audit of your current backup and disaster recovery system as well as your network’s security and overall health.

And if you’re open to it, I can also pull together a comprehensive report on your current IT spend (and what you’re getting for the money) and compare it against what you could save using advanced cloud-based solutions.

When done, we’ll give you a report of findings that will not only reveal if your data and computer network really is properly backed up and secured, but also if there is anything you need to do now to prevent a major network outage, data loss, hacker attack or other expensive, data-erasing disaster. Plus, we can almost always show you how to save a little (or a LOT) on hardware and software by switching to more efficient cloud computing solutions.

## What To Do Next

To schedule your **Free** IT Assessment, please call my office at 973-272-2324. The Assessment only takes 12 Minutes to conduct, and when done, you’ll know for sure if your company’s data is secured and exactly how fast you could be back up and running again in the event of a disaster (or if at all).

My assistant has been notified to look for your call and will put you through immediately. You can also e-mail me at [steve@mazteck.com](mailto:steve@mazteck.com).

Awaiting your response,

*Steve Santamouris*
